Islamabad, PK | uzairsaleemdev@gmail.com | uzairsaleem.dev | linkedin.com/in/uzair-saleem | github.com/developeruzairsaleem | +92 310 5187872

Full-stack engineer with five years building production SaaS end to end, across revenue analytics, online marketplaces, and operations software. I own each product from the database schema through the backend, frontend, and deployment, and most of my work is correctness-critical, where the data a user sees has to reconcile back to its source. I work primarily in Next.js, Node.js, and Postgres.

EXPERIENCE

Rocket Devs

Jul 2025 – Present

Full-Stack Engineer

Remote (US / EU / MENA)

- Built Indicador, a revenue-analytics platform that connects a founder's Stripe or Paddle account and reports MRR, ARR, retention, and net expansion across one or more businesses, with drill-down from any metric to the customer behind it.
- Engineered the recurring-revenue ledger behind every metric on the platform, reconstructing complete billing history from invoices and applying live events for proration-accurate expansion and contraction.
- Built 3 idempotent ingestion paths into a multi-tenant Postgres ledger, covering live webhooks, a daily catch-up job, and a 2-year historical backfill, so a newly connected account sees its full revenue history **within minutes**.
- Rebuilt Satraj, the daily pricing and invoicing system for a fuel wholesaler, replacing **39 hand-edited spreadsheets** and cutting the daily run from 45–60 minutes to **under 90 seconds**.

Design&Desktop

Jan 2025 – Jul 2025

Full-Stack Engineer

Remote (Germany)

- Rebuilt the in-browser video pipeline for an AI reel generator on MediaBunny, cutting render times from 2–10 minutes per clip to **about 10 seconds**.
- Engineered an automated reel pipeline that renders language-learning videos with Remotion and publishes them to Instagram through an n8n workflow.
- Built a restaurant-data dashboard that scrapes listings through headless Chromium, raising throughput **80%** by running 5 browser instances in parallel.
- Built per-warehouse delivery pricing and checkout address validation for a German B2B marketplace across a 12,000-entry postal-code dataset.

Apifiny

Feb 2023 – Dec 2024

Full-Stack Engineer

Islamabad

- Built B2B SaaS platforms end to end for agency clients, owning the schema, backend, frontend, and deployment.
- Shipped Diffed.gg, a three-sided marketplace where players hire ranked experts to climb competitive games, building the player, expert, and admin experiences in about 2 months on a 3-person team.
- Designed a configuration-driven ranking engine so administrators could onboard any game's rank structure, whether tiered divisions or straight ranks, without writing code, normalizing every order's start and target ranks into a common scale for pricing.

Apifiny

Dec 2021 – Feb 2022

Full-Stack Engineer Intern

Islamabad

- Built frontend and backend features for client B2B SaaS products, shipping production code across multiple projects.

PROJECTS

Indieicator | indieicator.com

Revenue analytics for Stripe and Paddle. Computes MRR, ARR, net revenue retention, and churn from a hybrid ledger of invoices and live events, each metric drillable down to the customer that drives it.

Satraj | satraj.inc

Operations software for a fuel distributor. Reconciles delivered gallons across Samsara telematics and supplier records, resolves delivery site locations through a 3-stage system backed by geofences, and pushes invoices into QuickBooks over a .NET bridge.

Diffed.gg | diffed-swart.vercel.app

Three-sided marketplace for competitive gaming services, with a cross-game ranking engine, a multi-currency wallet over Stripe and PayPal, live order chat, and admin tooling.

SKILLS

Languages: TypeScript, JavaScript, SQL, C# (.NET)

Frameworks and Runtime: Next.js, React, Node.js, Express, Socket.IO

Data: PostgreSQL, Supabase, Redis, Prisma

Payments and Infrastructure: Stripe, Paddle, PayPal, AWS, Cloudflare, Docker, GitHub Actions

EDUCATION

SZABIST University

Feb 2019 – Jan 2023

BS, Artificial Intelligence

Islamabad
