Full-stack engineer, four years shipping production SaaS end to end — revenue analytics, marketplaces, ops software. I own the whole stack from schema to deploy; most of the work is correctness-critical, where the numbers reconcile to source. Stack: Next.js, Node.js, Postgres, Stripe.

EXPERIENCE

Rocket Devs

Jul 2025 – Present

Full-Stack Engineer

Remote (US / EU / MENA)

- Built Indieicator, a Baremetrics-style revenue-analytics platform: connect Stripe or Paddle for MRR, ARR, retention, and expansion / contraction / churn across multiple businesses.
- Shipped a hybrid invoice + event MRR ledger after pure event-sourcing broke on Stripe's 3-month event retention — invoices carry the long tail, live events apply proration-accurate changes.
- Built three idempotent ingestion flows into a multi-tenant Postgres ledger — webhooks, a 24-hour cron, a 2-year backfill — with per-day ECB FX across 30 currencies and row-level tenant isolation.
- Rebuilt Sat-Raj for a fuel wholesaler, replacing 39 hand-edited spreadsheets and cutting the daily pricing + invoicing run from 45–60 minutes to under 90 seconds; led 2 junior engineers.

Technologies: *Next.js, Node.js, TypeScript, Postgres, Redis, Stripe, Paddle, AWS, GitHub Actions*

Design&Desktop

Jan 2025 – Jul 2025

Full-Stack Engineer

Remote (Germany)

- Cut AI-reel render times ~90% by moving the pipeline off in-browser FFmpeg.wasm to MediaBunny; multithreading alone bought only ~50% and swung 2–10 minutes across devices.
- Raised restaurant-scrape throughput ~80% with a pool of 5 parallel headless-Chromium workers, after target sites blocked direct HTTP requests.
- Modeled a German B2B marketplace's shipping on a ~12,000-row postal-code dataset I scraped and mapped to city / state, driving per-warehouse pricing and ZIP validation.

Technologies: *Next.js, Node.js, TypeScript, Postgres, Supabase, MediaBunny, Puppeteer, Framer Motion*

Apifiny

Jan 2022 – Dec 2024

Full-Stack Engineer

Islamabad

- Built B2B SaaS platforms end to end for agency clients; joined as a junior and within 18 months owned schema and architecture and led 2 engineers.
- Shipped Diffed.gg, a three-sided gaming-services marketplace (players, ranked experts, admin), end to end in 2 months on a 3-person team.
- Built a config-driven ranking engine so admins onboard any game's rank structure (divisions, tiers, straight ranks) without code, normalizing start and target ranks across games for pricing.

Technologies: *Next.js, Node.js, JavaScript, Postgres, Redis, Stripe, PayPal, Docker, Vercel*

PROJECTS

Indieicator | indieicator.com

Revenue analytics on Stripe and Paddle — hybrid invoice + event MRR ledger, per-day ECB FX across 30 currencies, and multi-tenant row-level security.

Sat-Raj | satraj.inc

Fuel-distribution ops reconciling Samsara telematics, supplier FTP, and delivered gallons; 3-gate address mapping and a .NET QuickBooks bridge.

Diffed.gg | diffed-swart.vercel.app

Three-sided gaming-services marketplace — cross-game ranking engine, Stripe + PayPal multi-currency wallet with day-of FX, live order chat, and admin tooling.

SKILLS

Languages: TypeScript, JavaScript, SQL, C# (.NET)

Frameworks & Runtime: Next.js, React, Node.js, Express, Socket.IO

Data: PostgreSQL, Supabase, Redis, Prisma

Payments & Infra: Stripe, Paddle, PayPal, AWS, Cloudflare, Docker, GitHub Actions

EDUCATION

SZABIST University

Nov 2018 – May 2022

BS, Artificial Intelligence

Islamabad
