## Senior Full-Stack Engineer

Islamabad, Pakistan · +92 310 5187872 · [uzairsaleemdev@gmail.com](mailto:uzairsaleemdev@gmail.com) · [uzairsaleem.dev](https://uzairsaleem.dev) · [github/developeruzairsaleem](https://github.com/developeruzairsaleem) · [LinkedIn](#)

### SUMMARY

Senior Full-Stack Engineer with **4+ years** shipping production SaaS end-to-end — frontend, backend, infra, and AI-powered features. Currently at **Rocket Devs**, where I've shipped three production SaaS products solo for founder clients in the US, EU, and MENA. Holding a high bar for correctness: integer-cent money handling, idempotent webhooks, parity-first migrations.

### SKILLS

|               |                                                                                                 |
|---------------|-------------------------------------------------------------------------------------------------|
| Languages     | TypeScript, JavaScript, Python, SQL                                                             |
| Frontend      | Next.js 15/16 (App Router), React 19, Tailwind CSS, Shadcn, Ant Design, Framer Motion, Recharts |
| Backend       | Node.js, Express, Prisma, REST APIs, Server Actions, Socket.IO                                  |
| Data          | PostgreSQL, MongoDB, Supabase, AWS RDS — schema design, migrations                              |
| AI / Agents   | Claude Code, AI-assisted dev workflow, agentic refactoring, prompt & brief engineering          |
| Payments      | Stripe Connect, PayPal, webhook idempotency, integer-cent accounting                            |
| Infra / Cloud | AWS (Amplify, RDS, S3, SES, Secrets Manager), Vercel, CloudFront, CI/CD                         |
| Integrations  | Stripe / Paddle / LemonSqueezy / Shopify, Samsara API, DTN feed, QuickBooks, UploadThing        |

### EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                               |

| <b>Full-Stack Developer</b> · Rocket Devs<br><i>Senior contractor for founder clients · AI-powered SaaS</i> <ul style="list-style-type: none"><li>Led end-to-end builds of <b>three production SaaS products</b> for founder clients in the US, EU, and MENA (see Selected Projects below).</li><li>Developed <b>AI shopping assistant</b> features on a Next.js + Prisma stack; shipped weekly with a 3-person team.</li><li>Implemented RBAC auth and CI/CD automation. Integrated payment processors achieving <b>&gt;95% transaction success rate</b>.</li><li>Engineered secure file upload pipeline supporting files up to 5 GB.</li></ul> | Jul 2025 – Present<br>Remote  |
| <b>Software Engineer</b> · Design&Desktop<br><i>AI vlog generator + data scraping platform</i> <ul style="list-style-type: none"><li>Built <b>AI vlog generator</b> with in-browser video editing. Replaced ffmpeg.wasm with MediaBunny (TypeScript) for an <b>80% performance improvement</b> in render time.</li><li>Built a restaurant data scraper improving extraction performance by <b>40%</b> through batched async fetches and selective parsing.</li></ul>                                                                                                                                                                             | Jan 2025 – Jul 2025<br>Remote |
| <b>Full-Stack Developer</b> · Apify<br><i>Client-facing web platforms · Stripe integrations · dashboards</i> <ul style="list-style-type: none"><li>Built and shipped multiple client-facing web platforms with a focus on Stripe integrations and role-based dashboards.</li><li>Designed an interactive quote generator that reduced proposal time by <b>60%</b> for a B2B services client.</li><li>Built lead-capture forms across multiple campaigns, increasing conversion by <b>35%</b>.</li></ul>                                                                                                                                          | Jan 2022 – Dec 2024<br>Remote |

### SELECTED PROJECTS

|                                                                                                                                                                                                                                                                                                                           |                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| <b>Indieicator</b><br>Baremetrics-style revenue analytics for indie SaaS. Designed an event-sourced data model — <b>store movements, not MRR</b> . Three reconciling sync paths heal webhook outages within 24h. 15+ Prisma models. · <i>Next.js · Node.js · Express · Prisma · PostgreSQL · Stripe Connect</i>           | <a href="https://indieicator.com">indieicator.com</a> |
| <b>Diffed.gg</b><br>Two-sided gaming services marketplace. Full transaction lifecycle: Stripe + PayPal checkout, Socket.IO chat, integer-cent wallet payouts, screenshot verification, fee-split admin flows. · <i>Next.js 15 · Prisma · PostgreSQL · Socket.IO · Stripe · PayPal · NextAuth</i>                          | <a href="https://diffed.gg">diffed.gg</a>             |
| <b>Sat-Raj</b><br>Fuel distribution platform replacing 30 years of Google Sheets workflow. Cut daily pricing run from <b>45–60 min</b> → <b>under 90 sec</b> . DTN supplier ingestion, Samsara BOL pipeline, QuickBooks invoice push. · <i>Next.js 16 · Prisma · PostgreSQL · AWS Amplify/RDS/SES · Samsara API · DTN</i> | <a href="https://satraj.inc">satraj.inc</a>           |

### SELECTED WRITING

- AI is leverage. It's not autocomplete.** — Most engineers use AI to type faster. A smaller group uses it to ship faster.
- The agent that worked while I slept** — On scoping work for an autonomous Claude Code loop that doesn't sleep.
- The hardest part of working with AI agents isn't the AI** — After a year with agents in the loop, the bottleneck is me, not the model.
