

Uzair Saleem

Senior Full-Stack Engineer

Islamabad, Pakistan · +92 310 5187872 · uzairsaleemdev@gmail.com · uzairsaleem.dev · [github/developeruzairsaleem](https://github.com/developeruzairsaleem) · [LinkedIn](#)

SUMMARY

Senior Full-Stack Engineer, **5 years** shipping production SaaS end-to-end. Built Indiecator's MRR engine on a **hybrid invoice + event ledger** that survives Stripe's 3-month event retention window. Cut Sat-Raj's daily pricing run from **45–60 min to under 90 sec** while pushing invoices into on-prem QuickBooks via a custom .NET bridge. Shipped Dified.gg's 3-sided gaming marketplace end-to-end in 2 months as senior on a 3-person team. Stack: Next.js, TypeScript, Postgres, Stripe, AWS — with Claude Code in the loop daily.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, C# / .NET
Frontend	Next.js 15/16 (App Router), React 19, Tailwind, Shadcn, Framer Motion, Recharts
Backend	Node.js, Prisma, REST + webhooks, Server Actions, Socket.IO, idempotent background jobs
Data	PostgreSQL (row-level security via Supabase), Redis caching, MongoDB, schema design + migrations
Payments	Stripe Connect (multi-currency wallets, webhook idempotency), Paddle, ECB-based per-day FX conversion
Integrations	Samsara API (telematics + geofences), QuickBooks (via .NET bridge), supplier FTP, FFmpeg / mediabunny
Infra / Cloud	AWS, Vercel, Cloudflare Pages, GitHub Actions (scheduled workflows), Docker, CI/CD
AI workflow	Claude Code (daily loop), agentic refactoring, design-doc-first briefs, autonomous overnight runs

EXPERIENCE

Senior Full-Stack Engineer · Rocket Devs <i>Lead engineer on founder-client SaaS builds · US, EU, MENA</i> Indiecator (Stripe Connect revenue analytics) — Designed and shipped 3 ingestion flows (webhook + daily catch-up cron + 2-year backfill) into a multi-tenant Postgres ledger with row-level security. Engineered the hybrid invoice + event MRR ledger that survives Stripe's 3-month event window. ECB-based per-day FX. Drill-down to source customer on every metric. Redis-cached dashboards. Sat-Raj (NJ fuel distribution ops platform) — End-to-end build replacing 39 hand-edited Google Sheets. Pricing engine with per-customer margins. Invoice engine reconciles Samsara telematics against supplier FTP via idempotent 3-hour jobs. 3-gate address mapping (dispatch dropdowns → pre-filled driver forms → Samsara geofence fallback). Custom .NET bridge pushes invoices into on-prem QuickBooks every 3h. - Managed 2 junior developers. Ran design-doc-first sprints with code review on every PR.	Jul 2025 – Present Remote
Full-Stack Engineer · Design&Desktop <i>AI tooling + data platform builds</i> AI reel generator with in-browser voice-cloned narration and video editing. Migrated rendering from FFmpeg.wasm (inconsistent 2–10 min per render across devices) to mediabunny after evaluating community benchmarks — ~90% reduction in render time (20 min → ~10 sec on large jobs). Germany restaurant scraping platform — replaced single-instance Chromium scraping with a 5-way parallel batch pipeline. ~80% throughput improvement. Built the consuming dashboard UI (Framer Motion) on top of Supabase. B2B bulk-goods marketplace — scraped and modeled ~12,000 German ZIP codes with city/state relations into Supabase to power shipping-cost calculation and form validation (off-the-shelf datasets didn't cover Germany's multi-ZIP-per-city case).	Jan 2025 – Jul 2025 Remote
Junior → Senior Engineer · Apify <i>Agency-style B2B SaaS builds for clients · promoted to Senior</i> Dified.gg (3-sided gaming marketplace) — Senior engineer on a 3-person team. Designed the schema and the game-creation engine that lets admins onboard any title and its ranking system (divisions, tiers, straight ranks) without code. Built the Stripe-funded multi-currency platform wallet with day-of-transaction ECB conversion. Shipped end-to-end in 2 months. - Shipped multiple additional B2B SaaS client builds. Designed schemas, admin panels, role-based dashboards, and dispute/refund flows across the stack. - Mentored 2 junior developers as lead. Code review on every PR. Design-doc-first sprint cadence.	Jan 2022 – Dec 2024 Onsite

SELECTED PROJECTS

Indiecator Baremetrics-style revenue analytics on Stripe Connect. Three ingestion flows (webhook + daily catch-up cron + 2-year backfill) into a multi-tenant Postgres ledger with row-level security. MRR engine: hybrid invoice + event ledger with proration — works past Stripe's 3-month event window. ECB per-day FX, Redis-cached dashboards, drill-down to source customer. · <i>Next.js · Node.js · Prisma · Supabase RLS · Stripe Connect · Redis · Cloudflare Pages</i>	indiecator.com
Dified.gg Three-sided gaming services marketplace (player, expert, admin). Built a game-creation engine so admins onboard any title and its ranking system — divisions, tiers, straight ranks — without code. Stripe-funded multi-currency platform wallet with day-of-transaction ECB conversion. Socket.IO chat. Senior on a 3-person team, shipped end-to-end in 2 months. · <i>Next.js · Node.js · Prisma · PostgreSQL · Socket.IO · Stripe · TypeScript</i>	dified.gg

Sat-Raj

satraj.inc

Internal ops platform replacing 39 hand-edited Google Sheets at a 30-yr NJ fuel wholesaler. Pricing engine with per-customer margins; invoice engine reconciles Samsara telematics against supplier FTP. **3-gate address mapping** (dispatch dropdowns → pre-filled driver forms → Samsara geofence fallback). Custom **.NET bridge** pushes invoices into on-prem QuickBooks every 3h. Daily pricing run: **45–60 min** → **under 90 sec.** · *Next.js · Node.js · PostgreSQL · Samsara API · .NET · AWS · QuickBooks*

SELECTED WRITING

AI is leverage. It's not autocomplete. — Most engineers use AI to type faster. A smaller group uses it to ship faster.

The agent that worked while I slept — On scoping work for an autonomous Claude Code loop that doesn't sleep.

The hardest part of working with AI agents isn't the AI — After a year with agents in the loop, the bottleneck is me, not the model.

EDUCATION

BS, Artificial Intelligence · SZABIST University Islamabad

Nov 2018 – May 2022
