Full-stack engineer who ships to production. I build data pipelines, billing workflows and AI automations with Next.js, Node, PostgreSQL and n8n. I have been writing production code since 2021 for clients in the US and Europe, and I work US hours from Islamabad.

Experience

Rocket Devs Jul 2025 – Present
Full-Stack Engineer *Remote (US / EU)*

- Engineered data intensive ETL pipelines for Indiecator (indiecator.com) that sync years of Stripe and Paddle billing history without downtime: a **2-year backfill**, live webhooks and a nightly reconciliation, all idempotent, into multi-tenant Postgres.
- Built the revenue ledger behind MRR, ARR, churn and retention from real invoices, so every number drills down to the customers behind it.
- Integrated and shipped Satraj's complete billing workflow from dispatch to QuickBooks Desktop (satraj.inc). It handles messy data from DTN and Samsara, sends unclear deliveries to an office review queue, and syncs invoices with retries and duplicate checks. **The whole office runs real invoices through it.**

Design&Desktop Jan 2025 – Jul 2025
Full-Stack Engineer *Remote (Germany)*

- Built an AI integrated reel generator and shipped its n8n workflow that posts finished reels to Instagram on a schedule.
- Rebuilt the in-browser video pipeline on MediaBunny. Render time went from 2–10 minutes to **about 10 seconds** per clip.
- Raised restaurant-data scraping throughput by **80%** with parallel headless Chromium workers for a listings dashboard.
- Shipped per-warehouse delivery pricing and checkout address validation across 12,000 postal codes for a German B2B marketplace.

Apifiny Feb 2023 – Dec 2024
Full-Stack Engineer *Islamabad*

- Led Diffed.gg (diffed-swart.vercel.app), a gaming coaching marketplace with checkout, live provider matching, wallets, payouts and admin tools. Shipped in **about 2 months** with a team of three.
- Designed a config-driven rank engine so admins can add any game's rank system without code changes.
- Owned client SaaS builds end to end: schema, API, frontend and deployment.

Apifiny Dec 2021 – Feb 2022
Full-Stack Engineer Intern *Islamabad*

- Shipped production features across several client B2B SaaS products, frontend and backend.

Projects

Satraj · fuel billing, dispatch to QuickBooks | satraj.inc
Daily DTN pricing, delivery tickets from DTN and Samsara, an office review queue, and QuickBooks Desktop invoice sync. Live in production.

Indiecator · revenue analytics | indiecator.com
MRR, ARR, churn and retention for Stripe and Paddle, from a ledger tied to real invoices. Code is public on GitHub.

Diffed.gg · gaming marketplace | diffed-swart.vercel.app
Card and PayPal checkout, live chat, provider wallets and admin verification, with separate apps for customers, providers and admins.

AI reel generator · n8n posting | uzairsaleem.dev/#work
Remotion renders, MediaBunny encoding and an n8n workflow that publishes reels to Instagram on a schedule.

Skills

Languages: TypeScript, JavaScript, SQL, Python
Frameworks: Next.js, React, Node.js, Express, Socket.IO
Data & infra: PostgreSQL, Supabase, Redis, Prisma, AWS, Docker, GitHub Actions
Automation & AI: n8n, LLM APIs, Webhooks, Remotion, Headless Chromium
Integrations: Stripe, Paddle, PayPal, QuickBooks Desktop, Samsara, DTN

Education

SZABIST University Feb 2019 – Jan 2023
BS, Artificial Intelligence *Islamabad*
