Full-stack engineer with 3 to 4 years of production experience. I have shipped a billing system for a fuel distributor, the data pipelines behind a revenue analytics product, and a gaming marketplace with payouts, using Next.js, TypeScript, Node and PostgreSQL. I work with teams in the US and Europe, on US hours from Islamabad.

Experience

Sat-Raj, Inc. (satraj.inc) Jan 2026 – Present
Full-Stack Engineer, contract *Remote (New Jersey, US)*

- Integrated and shipped a complete billing workflow from dispatch to QuickBooks Desktop for a gasoline and diesel distributor in NJ and PA. **The whole office runs real invoices through it every day.**
- Built the pricing engine from rack costs, freight, margins and NJ/PA fuel taxes. It had to match the old spreadsheet to the cent, so the math is pinned to the legacy rates in tests.
- Pulled supplier prices and delivery tickets from DTN and Samsara, so nothing gets retyped into Sheets and QuickBooks. Unclear GPS stops go to an office review queue instead of being guessed.
- Synced approved invoices to QuickBooks Desktop through the Web Connector with fuel and tax lines, retries and duplicate checks.
- Own fixes and features in production, like repairing history after a terminal feed swapped gross and net gallons, a Top Tier additive charge and a payables view.

Rocket Devs Jul 2025 – Present
Full-Stack Engineer *Remote (US / EU)*

- Engineered data intensive ETL pipelines for Indiecator (indiecator.com) that sync years of Stripe and Paddle billing history without downtime: a **2-year backfill**, live webhooks and a nightly reconciliation, all idempotent, into multi-tenant Postgres.
- Built the revenue ledger behind MRR, ARR, churn and retention from real invoices, so every number drills down to the customers behind it.

Design&Desktop Jan 2025 – Jul 2025
Full-Stack Engineer *Remote (Germany)*

- Built an AI integrated reel generator and shipped its n8n workflow that posts finished reels to Instagram on a schedule.
- Rebuilt the in-browser video pipeline on MediaBunny. Render time went from 2–10 minutes to **about 10 seconds** per clip.
- Raised restaurant-data scraping throughput by **80%** with parallel headless Chromium workers for a listings dashboard.
- Shipped per-warehouse delivery pricing and checkout address validation across 12,000 postal codes for a German B2B marketplace.

Apifiny Feb 2023 – Dec 2024
Full-Stack Engineer *Islamabad*

- Led Diffed.gg (diffed-swart.vercel.app), a gaming coaching marketplace with checkout, live provider matching, wallets, payouts and admin tools. Shipped in **about 2 months** with a team of three.
- Designed a config-driven rank engine so admins can add any game's rank system without code changes.
- Owned client SaaS builds end to end: schema, API, frontend and deployment.

Apifiny Dec 2022 – Jan 2023
Full-Stack Engineer Intern *Islamabad*

- Shipped production features across several client B2B SaaS products, frontend and backend.

Projects

Indiecator · revenue analytics | indiecator.com
MRR, ARR, churn and retention for Stripe and Paddle, from a ledger tied to real invoices. Code is public on GitHub.

Diffed.gg · gaming marketplace | diffed-swart.vercel.app
Card and PayPal checkout, live chat, provider wallets and admin verification.

Skills

Languages: TypeScript, JavaScript, SQL, Python
Frameworks: Next.js, React, Node.js, Express, Socket.IO
Data & infra: PostgreSQL, Supabase, Redis, Prisma, AWS, Docker, GitHub Actions
Automation & AI: n8n, LLM APIs, Webhooks, Remotion, Headless Chromium
Integrations: Stripe, Paddle, PayPal, QuickBooks Desktop, Samsara, DTN

Education

SZABIST University
BSCS (Bachelor of Computer Science) *Islamabad*
