

Uzair Saleem

Senior Full-Stack Engineer

Islamabad, Pakistan · +92 310 5187872 · uzairsaleemdev@gmail.com · uzairsaleem.dev · [github/developeruzairsaleem](https://github.com/developeruzairsaleem) · [LinkedIn](#)

SUMMARY

Senior Full-Stack Engineer with **5 years** shipping production SaaS end-to-end — three years as part of small product teams at Apify and Design&Desktop, and as the lead engineer on end-to-end contract builds for founder clients in the US, EU, and MENA. Comfortable collaborating across roles or owning the whole stack.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	Next.js 15/16 (App Router), React 19, Tailwind CSS, Shadcn, Ant Design, Framer Motion, Recharts
Backend	Node.js, Express, Prisma, REST APIs, Server Actions, Socket.IO
Data	PostgreSQL, MongoDB, Supabase, AWS RDS — schema design, migrations
AI / Agents	Claude Code, AI-assisted dev workflow, agentic refactoring, prompt & brief engineering
Payments	Stripe Connect, PayPal, webhook idempotency, integer-cent accounting
Infra / Cloud	AWS (Amplify, RDS, S3, SES, Secrets Manager), Vercel, CloudFront, CI/CD
Integrations	Stripe / Paddle / LemonSqueezy / Shopify, Samsara API, DTN feed, QuickBooks, UploadThing

EXPERIENCE

Full-Stack Developer · Rocket Devs	Jul 2025 – Present
<i>Senior contractor for founder clients · AI-powered SaaS</i>	Remote
- Led end-to-end builds of three production SaaS products for founder clients in the US, EU, and MENA (see Selected Projects below). - Developed AI shopping assistant features on a Next.js + Prisma stack; shipped weekly with a 3-person team. - Implemented RBAC auth and CI/CD automation. Integrated payment processors achieving >95% transaction success rate. - Engineered secure file upload pipeline supporting files up to 5 GB.	
Software Engineer · Design&Desktop	Jan 2025 – Jul 2025
<i>AI vlog generator + data scraping platform</i>	Remote
- Built AI vlog generator with in-browser video editing. Replaced ffmpeg.wasm with MediaBunny (TypeScript) for an 80% performance improvement in render time. - Built a restaurant data scraper improving extraction performance by 40% through batched async fetches and selective parsing.	
Full-Stack Developer · Apify	Jan 2022 – Dec 2024
<i>Client-facing web platforms · Stripe integrations · dashboards</i>	Onsite
- Built and shipped multiple client-facing web platforms with a focus on Stripe integrations and role-based dashboards. - Designed an interactive quote generator that reduced proposal time by 60% for a B2B services client. - Built lead-capture forms across multiple campaigns, increasing conversion by 35%.	

SELECTED PROJECTS

Indieicator	indieicator.com
Baremetrics-style revenue analytics on Stripe Connect. Three ingestion flows (webhook + daily catch-up cron + 2-year backfill) into a multi-tenant Postgres ledger with row-level security. MRR engine: hybrid invoice + event ledger with proration — works past Stripe's 3-month event window. ECB per-day FX, Redis-cached dashboards, drill-down to source customer. · Next.js · Node.js · Prisma · Supabase · RLS · Stripe Connect · Redis · Cloudflare Pages	
Diffed.gg	diffed.gg
Three-sided gaming services marketplace (player, expert, admin). Built a game-creation engine so admins onboard any title and its ranking system — divisions, tiers, straight ranks — without code. Stripe-funded multi-currency platform wallet with day-of-transaction ECB conversion. Socket.IO chat. Senior on a 3-person team, shipped end-to-end in 2 months. · Next.js · Node.js · Prisma · PostgreSQL · Socket.IO · Stripe · TypeScript	
Sat-Raj	satraj.inc
Internal ops platform replacing 39 hand-edited Google Sheets at a 30-yr NJ fuel wholesaler. Pricing engine with per-customer margins; invoice engine reconciles Samsara telematics against supplier FTP. 3-gate address mapping (dispatch dropdowns → pre-filled driver forms → Samsara geofence fallback). Custom .NET bridge pushes invoices into on-prem QuickBooks every 3h. Daily pricing run: 45–60 min → under 90 sec . · Next.js · Node.js · PostgreSQL · Samsara API · .NET · AWS · QuickBooks	

SELECTED WRITING

- AI is leverage. It's not autocomplete.** — Most engineers use AI to type faster. A smaller group uses it to ship faster.
- The agent that worked while I slept** — On scoping work for an autonomous Claude Code loop that doesn't sleep.
- The hardest part of working with AI agents isn't the AI** — After a year with agents in the loop, the bottleneck is me, not the model.
