

Uzair Saleem

Senior Full-Stack Engineer

Islamabad, Pakistan · [+92 310 5187872](tel:+923105187872) · uzairsaleemdev@gmail.com · uzairsaleem.dev · [github/developeruzairsaleem](https://github.com/developeruzairsaleem) · [LinkedIn](#)

SUMMARY

Senior full-stack engineer, 5 years shipping production SaaS end to end across revenue analytics, marketplaces, and operations software. Most of the work is correctness-critical: revenue math that reconciles to source, idempotent ingestion, per-day currency conversion.

SKILLS

Languages	TypeScript, JavaScript, SQL
Frontend	Next.js (App Router), React, Tailwind CSS
Backend	Node.js, Express, Prisma, REST, webhooks, Socket.IO
Data	PostgreSQL, Supabase (RLS), Redis
Payments & infra	Stripe, Paddle, PayPal, AWS, Cloudflare, Docker, GitHub Actions

EXPERIENCE

Senior Full-Stack Engineer · Rocket Devs Jul 2025 – Present
[Remote \(US, EU, MENA\)](#)

Lead engineer on two founder products, owned end to end. Led 2 junior developers.

- Built **Indieicator** (indieicator.com), a Baremetrics-style revenue analytics platform: founders connect Stripe or Paddle and see MRR, ARR, retention, and expansion / contraction / churn.
- Shipped a hybrid invoice + event MRR ledger after the pure event-sourced version broke. Stripe only retains 3 months of event history, so invoices carry the long tail while live events catch proration-accurate plan changes the moment they happen.
- Designed three idempotent ingestion flows into a multi-tenant Postgres ledger (live webhooks, a 24-hour catch-up cron, a 2-year backfill), with per-day FX across 30 currencies and Redis-cached reads so years of history still load fast.
- Rebuilt **Sat-Raj** (satraj.inc) for a 30-year NJ fuel wholesaler, replacing **39 hand-edited spreadsheets** and cutting the daily pricing and invoicing run from **45-60 min to under 90 sec**.

Full-Stack Engineer · Design&Desktop Jan 2025 – Jul 2025
[Remote \(Germany\)](#)

Shipped several client products in parallel: an AI video tool, scrapers, and a B2B marketplace.

- Cut AI-reel render times **~90%** by moving the pipeline off FFmpeg.wasm to MediaBunny. Multithreading the in-browser renderer only bought ~50%, and client-side rendering swung 2-10 min across devices.
- Raised restaurant-scrape throughput **~80%** by replacing one-at-a-time crawling with a pool of 5 parallel headless Chromium workers, after target sites blocked direct HTTP.
- Modeled a German B2B marketplace's shipping on a **~12,000-row** postal-code dataset I scraped and mapped to city and state, driving per-warehouse pricing and ZIP validation on input.

Engineer → Senior Engineer · Apifiny Jan 2022 – Dec 2024
[Islamabad, Pakistan](#)

Promoted junior to senior in 18 months. Built B2B SaaS platforms end to end for agency clients; owned schema and architecture as senior.

- Shipped **Diffed.gg** (diffed.gg), a three-sided gaming-services marketplace (players, ranked experts, admin), end to end in **2 months** on a 3-person team.
- Built a config-driven ranking engine so admins onboard any game and its rank structure (divisions, tiers, or straight ranks) without code. The hard part was making start and target ranks comparable across games for pricing and matching.
- Designed a Stripe and PayPal multi-currency wallet with day-of-transaction FX, plus Socket.IO order chat and fee-split payouts. Mentored 2 junior developers.

EDUCATION

SZABIST University Islamabad · BS in Artificial Intelligence Nov 2018 – May 2022
