SUMMARY

Senior Full-Stack Engineer, **5 years** shipping production SaaS end-to-end. Currently lead engineer on two production builds for founder clients — a Stripe-powered revenue analytics platform, and an internal operations platform for a 30-year-old US fuel wholesaler that replaced a daily **45–60 minute manual workflow** with software that finishes the same job in **under 90 seconds**. Promoted Junior → Senior at Apify over 3 years; shipped a 3-sided gaming marketplace end-to-end in **2 months** as senior on a 3-person team. Stack: Next.js, Node.js, Express, Postgres, Supabase, AWS, Cloudflare — with Claude Code in the loop daily.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	Next.js (App Router), React, Tailwind, Shadcn, Framer Motion, responsive design
Backend	Node.js, Express, Prisma, REST API design, webhooks, Socket.IO, OAuth / JWT authentication
Data	PostgreSQL, Supabase, Redis, MongoDB; schema + database design, migrations
Payments	Stripe, Stripe Connect, Paddle, multi-currency wallets
Testing	Jest, Vitest, Playwright; unit + integration testing
Cloud / Infra	AWS (Lambda, S3, RDS, EC2), Cloudflare, Vercel, Docker, CI/CD, GitHub Actions; Sentry + structured logging observability
AI / Process	Claude Code, prompt engineering, agentic workflows, n8n; Agile / Scrum, system design, code review, mentorship, cross-functional collaboration

EXPERIENCE

Senior Full-Stack Engineer · Rocket Devs	Jul 2025 – Present
Lead engineer on founder-client SaaS builds · US, EU, MENA	Remote
• Lead engineer on two production SaaS builds shipped to live customers : a Stripe revenue analytics platform and an internal operations platform for a 30-year-old US fuel wholesaler. Own system design, architecture, schema and database design, and stakeholder communication with founder clients.	
• Replaced a 30-year-old company's spreadsheet workflow. Daily pricing run went from 45–60 minutes to under 90 seconds after performance optimization across the pricing, invoicing, and supplier-reconciliation pipelines.	
• Mentored 2 junior developers . Set the engineering culture: design-doc-first sprints, code review on every PR, Sentry + structured logging observability.	
Full-Stack Engineer · Design&Desktop	Jan 2025 – Jul 2025
AI tooling + data platforms	Remote
• Rebuilt an AI video generator's rendering pipeline after the original approach was unreliable across user devices. New design cut average render time by ~90% (minutes to seconds) and made the experience consistent on every browser.	
• Built two B2B platforms for the German market. Data-scraping pipeline ran ~80% faster after I parallelized the work. Marketplace shipping engine solved Germany's multi-ZIP-per-city addressing problem by modeling ~12,000 ZIP codes ourselves — off-the-shelf datasets didn't cover it.	
Senior Engineer · Apify	Jul 2023 – Dec 2024
Agency-style B2B SaaS builds for clients · Onsite (Karachi)	
• Shipped a 3-sided gaming marketplace end-to-end in 2 months leading a 3-person team. Designed the core engine that lets non-engineers onboard new games and their ranking systems without writing code — same engine still runs in production today.	
• Built and shipped multiple B2B SaaS products as agency lead engineer. Owned API design, OAuth authentication, schemas, admin tools, multi-currency wallets, dispute and refund flows.	
• Mentored 2 junior developers ; code review on every PR; cross-functional collaboration with PMs and clients.	
Junior to Mid Engineer · Apify	Jan 2022 – Jun 2023
• Promoted from Junior to Senior Engineer in 18 months . Took over and shipped builds prior engineers had stalled on, including the gaming marketplace.	
• Built features across multiple agency-client SaaS products; rapidly leveled up across the stack.	

SELECTED PROJECTS

Indieicator	indieicator.com
Built a Baremetrics-style revenue analytics platform on Stripe Connect end-to-end for a founder client; shipped to production in ~3 months.	
Next.js · Node.js · Express · Prisma · Supabase · Stripe Connect · Redis · Cloudflare	
• Designed 3 ingestion flows (live webhooks + daily catch-up cron + 2-year initial backfill) feeding a multi-tenant Postgres ledger with row-level security via Supabase.	
• Engineered a hybrid invoice + event MRR ledger that survives Stripe's 3-month event retention window and handles proration on mid-cycle plan changes.	
• Per-day FX conversion via the European Central Bank API; Redis-cached dashboards; drill-down to source customer on every metric.	
Diffed.gg	diffed.gg
Shipped a 3-sided gaming services marketplace (player, expert, admin) end-to-end in 2 months as senior on a 3-person team.	Next.js · Node.js · Express · Prisma · PostgreSQL · Socket.IO · Stripe · TypeScript
• Built a game-creation engine so admins onboard any title and its ranking system — divisions, tiers, straight ranks — without writing code.	
• Designed a Stripe-funded multi-currency platform wallet with day-of-transaction ECB conversion.	
• Socket.IO chat with order context; OAuth-based authentication; admin fee-split flows; screenshot verification.	
Sat-Raj	satraj.inc
End-to-end fuel distribution ops platform for a 30-yr NJ wholesaler. Daily pricing run: 45–60 min → under 90 sec.	Next.js · Node.js · Express · PostgreSQL · Samsara API · AWS · QuickBooks
• Pricing + invoicing engine with per-customer margins; idempotent 3-hour background jobs reconcile Samsara truck telematics against the supplier FTP.	
• 3-gate address mapping (dispatch dropdowns → pre-filled driver forms → Samsara geofence fallback) cut invoice mismapping to near zero.	
• Custom .NET bridge on the ops team's Windows machine pushes new invoices into on-prem QuickBooks every 3 hours.	

EDUCATION · BS, Artificial Intelligence · SZABIST University Islamabad · Nov 2018 – May 2022
